Methodological guidelines drawn up in accordance with the requirements of credit-modular system of school organization and structure are consistent with the indicative content of the discipline recommended by the European Credit Transfer System (ECTS).

Методичні вказівки складені відповідно до вимог кредитно-модульної системи організації навчального процесу та узгоджені з орієнтовною структурою змісту навчальної дисципліни, рекомендованою Європейською кредитно-трансферною Системою (ECTS).

Reviewer: prof., Ph.D. M. I. Samojlenko

Recommended Department PM and IT, protocol №2 of 30.09.2013 year.

The purpose of

The main goal of our work - to get acquainted with the principles of automation of accounting using the program "1C: Accounting". To do this you must learn how to install the program, set up the constants and parameters accounting, working with directories, documents, postings, operations, generate and analyze the standard and statutory reporting program "1C: Accounting".

The content and sequence of work

The initial data for this paper is an initial balance sheet. This balance is you make yourself or get the data ready for the teacher. Further work will be like that.

- 1) According to the initial balance (condition task) write entries for the record remains in the database "1C-Accounting".
- 2) Verify the entries received from the intelligence of accounts of the "1C".
The purpose of this stage - to find out the list of directories that will be involved in the formation of entries on the balance.

Important! The first two points are of a preparatory nature. They can be done without the program "1C", writing simply posting on a sheet of paper. The purpose of this action - to understand the problem, understand the structure of entries and references to fill them. - An important step. Without it, it is almost impossible to consciously work with the program "1C: Accounting". Only when the worksheet will list entries will be clear plan for further action, you can include a "1C" and begin to address the problem.

- 3) Call the program "1C", fill in a constant consideration.
- 4) Fill in the reference true values based on the conditions of the problem.
- 5) Keep the operation (wire) to store account balances in accounting. To enter the balances of inventories, and the Settlement of arrears of wages, use of documents, "Entering the remnants".
- 6) Create the turnover balance sheet and check the balance built.
- 7) Close the debt of Settlement with the contractors and the budget (if any).
- 8) Create a few strings of documents for the purchase and sale of commodities. Such chains should reflect:
 - The purchase of commodities on an advance payment;
 - The purchase of commodities without payment;

- Sale of products, goods, services, prepaid;
 - Sales of products, goods and services without payment.
- 9) Make the payroll.
 - 10) Calculate and list the payments to the budget.
 - 11) Give the salary. Analyze the different types of work to the ticket office at this stage.
 - 12) Close the reporting period.
 - 13) Create the turnover balance sheet, analyze it.
 - 14) Create the turnover balance sheet accounts for the main account, which are involved in the problem.
 - 15) Examine the state of the accounts of standard reports, the program "1C: Accounting". Use the reports "Account Balance", "Card Account". "Card Account for contractor companies".
 - 16) Use the "Report on transactions of" make sample entries from the database program "1C: Accounting".
 - 17) Import the entries in Excel. This result is to convert the format of the database.
 - 18) Create a number of standard reports from the program "1C: Accounting".
 - 19) Import the reports in Excel. Analyze the major problems in carrying out this work.
 - 20) The results of the report write.

Composition and preparation of initial data

1. Select a company (real or hypothetical). To do this, the company you need to know: the name (short and full), a list of staff (3-5 people, among whom must be present director and chief accountant), the code TIN EDRPOU, bank details. These take the form of a table (hereinafter - "Table 1").
2. Prepare an initial balance sheet. Verify the accuracy of the balance sheet. These take the form of a table (hereinafter referred to as "Table 2").

At the balance sheet follow these recommendations.

- The range of commodities must have at least 5 items.
- TMCs should form at least two product groups (eg. "Dry", "Cosmetics", "Clothing", etc.).
- The original balance should be the remnants of Settlement (as with customers and suppliers).

- The original balance should be reported balances of cash or non-cash accounts.
 - The original balance should be the remnants of fixed assets.
3. Make a list of entries for the record remains on the balance of the original data. Postings made into a table (hereinafter referred to as "Table 3").
 4. Open the program "1C-Accounting".
 5. The menu item "Operation → Chart of Accounts" open chart of accounts of the "1C".
 6. In this regard, check out all the accounts that appear in the table of your entries for the initial balance.
 7. For each account, write down those directories analytical accounting (the so-called "contractor companies"), which are involved in terms of the "1C"
 8. In a separate table (hereinafter referred to as "Table 4") make a list of directories. At this point you are ready to start working with the program "1C-Accounting".

Work program "1C-Accountancy"

Actually working with "1C" will consist of the following steps.

1. Call the program. Using data about the enterprise from Table 1, form a constant consideration. Methodological material on this phase of work is represented in the "Home accounting". The sequence of filling of the constants (screen forms and comments) carry over to Word, and make out in the form of the first section of the report.
2. The menu item "Directories" fill those references that appear in Table 4. The sequence of filling of directories (on-screen forms and comments) carry over to Word, and make out in the form of the second section of the report.
3. Determine the date of entry of the original remains.
4. The menu item "Tools → Options" fix the date of this parameter in the "Working Date".
5. Through the menu with operations and postings Write the wiring from Table 3 in the program "1C". The sequence of filling of the posting (on-screen forms and comments) carry over to Word, and make out in the form of a third section is the father.

Important! The data on the balance of commodities and mutual at this point is not entered. These actions we perform using documents.

6. Call the menu "Documents". In the section "Entering the remnants of" found documents "Remains of commodities" and "Remains of settlements".
7. With these documents, enter into the program "1C-Accounting" balances on goods, accounts receivable and accounts payable. The sequence of filling of the posting (on-screen forms and comments) carry over to Word, and make out in the form of a fourth section is the father.
8. The menu item "Reports" form the turnover balance sheet (SALT). Check the correctness of this statement of the initial balance (detailed balance on the account, "00"). SALT portable data to Word, in the fourth section of the report.
9. Turning off the fixation of the working date (menu "Tools → Options").
10. With the help of documents "Invoice", "Sales Invoice", "payment order", "bank statement" close the debt of Settlement. The sequence of required documents (on-screen forms and comments) carry over to Word, and make out in the form of a fifth section of the report.
11. Forming an update SALT. Make sure that all debts are closed. Table with data of SALT include the fifth section of the report. Supplement its comments.
12. We form a sequence of several chains of documents for the purchase of inventories and sales of inventories. Among these chains must be present: purchase pre-paid, the purchase discounts, the implementation of an advance payment, the implementation without prepayment. Every time you browse the preparation of documents made their posting.
13. The sequence of required documents (on-screen forms and comments), a table with wires transfer the documents to Word and fill in as the sixth section of the report.
14. With the help of documents, "Payroll", "Payment of wages" will pay staff salaries and give your enterprise. The sequence of filling of directories for the payroll, the procedure for completing the documents and made them take the form of posting the seventh section of the report.
15. Create a turnover balance sheet debt of the company and analyze the budget.
16. The document "bank statement" list all the contributions to the budget. Arrange them documented with payment instructions.
17. The document "paydays" issue the salaries.
18. Close the tax period and analyze the results using the standard reports of the "1C".

Important! When calculating the (issue) analyze the impact of wage constant, "The postings on hand to do only cash orders" work papers "Payroll", "Payment of wages". To do this, hold the documents do twice enabled and disabled by a constant constant. Look at the posting of documents, "Payroll", "Payment of wages". Write a conclusion.

An example of performance

Described stages of implementation, we show in this sample.

Someone Benefactor B. B. founded the company in the wholesale-retail sales of outerwear and introduced in the authorized fund amount of 40,000 USD., consisting of the value of the car (25,000 USD, listed on the Director Ivan Ivanov) and the sum on p / s 15 000 USD. At the time of introduction of residues were supplier relationships LLC "Daval", of which there are unpaid delivery of 10 sweaters at a price of 100 UAH. (Excluding VAT). There is also a prepaid customer LLC "Took" by 5 sweaters at a price of 180 UAH. (VAT).

This – the source data for the initial balance. In the table we write the posting, which will spread the data of the balance of the accounts of accounting. The postings will be like that.

Table 1 – Input balances.

AccD	AccC	Amount	Comment
00	40	40000	balance of the authorized capital
311	00	15900	Balance on current account
6415	00	50	Balance at credit of VAT
105	00	25000	Non-current assets (Car)
00	631	1200	Due to the supplier
00	6811	900	Advances from customers (advance payment, advance payment of VAT to USD 150.)
281	00	1000	Balance of commodities in stock

Open the Chart of Accounts program "1C". Complement the table names of directories, which are involved in the analysis of our entries (listed as "SbkD" and "SbkK" in Table 2). In addition, the column "Number" accents quantitative data for

accounting. All postings are forming on the date of entry remains 31/08/10. The data are summarized in the table.

Table 2 – Input residues and mutual.

Date	D	AccD	C	AccC	Coun t	Amount	Comment	Dokum.
31/08/10	00		40	Benefactor (Handbook "Konrtagency")		40000	UstFond	Oper. A
31/08/10	311	NashRS (reference "Account of our company")	00			15900		
	6415	VAT20% (Reference "Taxes and fees")	00			50		
	105	MOL Ivanov (Reference "Storage facilities")	00			25000	car (directory "Fixed assets")	
30.03.03	00		631	Daval (handbook "Konragenty" dokuent "Remains of settlements)		1200		OB- 0000001
30.03.03	00		6811	(Reference "Konragenty" dokuent "Remains of settlements)		900		OB- 0000002
	643	(Reference "Konragenty" dokuent "Remains of settlements)	00			150		
30.03.03	281	Party Default (Reference "Nomenclatur e", "Storage facilities" 00 October 1000 the East. TMC	00		10	1000	East. TMC	BBO- 000001

Now we see that the basic references for completing entries – is: "Nomenclature", "Storage facilities", "The accounts of our company," "Employees", "Contractors", "Fixed assets", "Taxes and royalties".

Most of these directories will contain a few elements. Therefore they can fill in as the formation of lines and documents. The exception is the reference book "Nomenclature". It is necessary to provide three groups of commodities. We'll make them so, "Clothing", "Beauty", "Dry". The group of "clothing" write data on TMC "sweater". The remaining teams will still be empty. Handbook "Taxes and fees" is normative. His touch, we will not.

At this preparatory work is completed. You can get to work with the program. The first stage of this work is to configure the parameters of accounting.

1. The document "paydays" issue the salaries.

2. Close the tax period and analyze the results using the standard reports of the "1C".

Important! When calculating the (issue) analyze the impact of wage constant, "The postings on hand to do only cash orders" work papers "Payroll", "Payment of wages". To do this, hold the documents do twice enabled and disabled by a constant constant. Look at the posting of documents, "Payroll", "Payment of wages". Write a conclusion.

Filling the constants accounting

Calling the program "1C-Accounting". A window will appear with the Master of filling constants.

If it does not appear, go to the menu "Help → helper filling constants".

Working with the Master is organized in steps. The transition from one step to another is performed by clicking the "Next". While working with the Master, we need to enter the data. The appearance of this window may be different in different configurations of the program.

Most of the options in the Settings window, you can leave the default. At this stage, the only required action - is to register the company. Other details can be refined at any time. We recommend to enter such data.

Company name (full and abbreviated). In the example - is LLC "Stream".

Way of accounting for transactions with counterparties, we have chosen the option "in the context of bills / invoices").

The names of directors, chief accountant and cashier. The information we choose from the directory "Employees". Reference is now empty. Therefore, we must first enter data in the directory, and then select the desired item from it. To add an employee, open the directory, click in the box, right-click, select "New" and fill out a

card. When the card is ready, click "OK". The handbook will be a new employee. Double-click it to substitute the value into the appropriate field of constants of accounting.

The "Business Type" set to "Basic".

The "accounting method partitionnogo" chosen "by lot" or «FIFO».

Classes cost reserve account by default, ie "8 and 9 classes of accounts".

Important! On the tab "Advanced" in the card of your company must fill in the parameter "Code separator accounting" (sometimes called "prefix separator accounting"). These need to write any character or number.

All the constants account set up.

Preparation of manuals

Work with directories do via the menu "References". Almost all of the configuration steps can be performed through the right mouse button (RMB). Other methods of work, we are now useless. After clicking the RMB from scratch directory context menu appears. In this menu, we need the option "New", "Create Group", "Edit", "Delete". Item "New" creates a new directory and opens a window with the appropriate card (employee, TMC, a description of the warehouse, etc.). This card must enter the data and click "OK". Click "Create Group" creates a new group in the directory. Inside the group, you can add specific items. Groups need to be organized in a directory structure. Just as the organized structure of the data in a folder on your hard disk.

Item "Change" opens the item (card) manual editing. To adjust the item, click the RMB needs to be done on this item.

Click "Delete" erases the element reference. The same action can be performed by pressing «Del».

Important! When you delete data "1C" does not erase the data physically. It just marks the data to be deleted. To permanently delete the marked objects, you must close all windows and turn to the menu "Actions" (Operation "Delete marked objects"). The program will analyze references to deleted objects, check the integrity of the database and only then will remove the data.

Sequence of formation of directory for our example

1. Open Directory "Employees". Acquainted with the structure of the directory.
2. A right mouse button to add a directory of new items. Write the key employees (director, treasurer, chief accountant of not more than 5 persons) and their details.

3. Open the directory "Storage facilities". We bring in this guide, at least one warehouse (wholesale).

4. Open the directory "Account of our company". Create a directory to account for non-cash payments (in this example it is called "NashRS"). The form of this account, enter information about the bank (selected from the directory of banks), account number, MFO. We account for non-cash payments must include the option to "Bank transfer". In this setting, "Accounting Account" program assigns the value "311". Check it. The currency for the item "NashRS" should be the hryvnia.

5. Add a reference to the "Account of our company" item for cash payments. In this example it is named "Cash". For him, DISCONNECT the option to "Non-cash payment". In this setting due to the accounting should be "301". The settlement currency for this element - also torque. In the description of the account "Cash" bear the number of supplies / receipt of orders, cash book sheet. These values can be chosen arbitrarily.

6. Open Directory "Nomenclature".

7. Right-click a blank area of the directory, select the item "New Group".

8. Enter the name of "goods".

9. Open the group of "goods". To do this, click the left button on the icon with the "+" sign to the right of the group name.

10. Within the group "Goods" are creating three groups: "Clothing", "Cosmetics" and "Dry".

11. discovered a group of "clothing".

12. In free space, right-click with your mouse. From the context menu, select the item "New" (create a new element, ie, the card product).

13. The form fill options: product name, purchase price, cost of sales (wholesale and retail). In the example we need to create at least one element - TMC "sweater". The data to fill the card TMC "Sweater" given table.

Table 3 – Details of the TMC "Sweater"

TMC name	Unit.	Selling price without VAT	Retail price without VAT	Purchase price
Sweater husband	pieces.	150.00 USD	200.00 USD	100.00 USD

In the formation of the purchase price, the value "100" (euro) enter into a special box on the form. In this case, "1C" will add to the price and the VAT amount will show the total value of "120" (USD). By hypothesis, the problem selling price include VAT inclusive. To enter this value, do so.

- Find a window to enter the selling price (to the left in the window with the parameters of the goods).

- The right of the window is a button "VAT". We click on it. This opens a window to fill the price.

- Enter the value "180". The program "1C" otminusuet that price VAT and bottom of the window will show the price excluding VAT (150 USD).

14. The directory "Nomenclature" introduce a few more items. For example, such data.

Table 4 – Details of the TMC

TMC name	Unit.	Selling price without VAT	Retail price without VAT	Purchase price
Group: Products				
Group: Other				
Bag wives.	pieces.	150.00 USD	185.00 USD	125.00 USD
Category: Cosmetics				
Cosmetic set	pieces.	25.00 USD	30.00 USD	20.00 USD
Group: Clothes				
Blouse wives	pieces.	50.00 USD	70.00 USD	25.00 USD
Sweater husband	pieces.	150.00 USD	200.00 USD	100.00 USD

Enter transactions and transactions

The program "1C-Accounting" fill in the ledger using:

- Manual entries;
- Operations;
- The documents.

Hand wiring is practically no different from "classical" definition in praktichke accounting. The only feature – when filling in the accounts of debit and credit the program will prompt you to choose the values of the directories (contractor companies) that are connected to the respective accounts of accounting.

Operation - an object which comprises a group of entries. Such a union like the data folder on your hard disk. His goal – to put together a few postings on their intended use. Then, in the Journal of Operations you will only see one entry with the name of the operation. Clicking on it will reveal the operation wire. This grouping

allows you to hide the minor details, which greatly simplifies the work with the magazines of the "1C".

The document - an object that consists of a screen form (here you enter the data), the printing form (in its print on the printer) and software modules. Some of these components of the document may not be available. The task of the module document - check the data and, if necessary, to place entries in the ledger. In this document itself (the data), the program writes in some magazine (bank records, receipt, account, etc.). A posting records in a common database. The program remembers the relationship between documents and postings, which he built. These entries can not be changed manually. You can open the document to correct its data and save it. A posting of "1C" update automatically. Working with documents - the main method of accounting in the "1C".

In our example, for recording data on the balance we will do so:

- Balances of fixed assets, debts of the VAT, information about the amount of authorized capital and the current account, we introduce with a single operation;

- The balance of goods and settlement paperwork.

Do so.

- Call the menu "Actions".

- Choose "Operations". Open the transaction log.

- It RMB click, from the context menu, select "New". Opens a transaction. In the upper part of the window has a title transaction. It fill the field "Date", we can write a comment. At the bottom of the table is for the posting. Initially it is empty.

- Right-click on the posting (or press key «Ins»). Posting will be available. It is available for the field of account debit.

- Enter the account or select it from the Chart of Accounts. To open the Chart of Accounts, click the «F4».

- When a debit account specified, press «Enter». The program will ask to enter the next element of wiring. Depending on the account, it can be a directory record or credit score.

If you are prompted to select a value from the directory, do it. If the value is not in the directory, enter it (in RMB) and select the posting.

- Press the «Enter». The program will prompt you for the next part of the wiring. And so to continue until the entire record of posting will not be filled.

- Then press «Ins» and form the next posting.

- When finished, click "OK".

Postings in such transactions must be made:

Table 5 – Input residues in 1C.

Pic. 5 — Form a document "Analysis of contractor companies"

In this table, we see two debts. They need to be close, as follows:

- On account of payment to ship five sweaters for 180 days. (Write down the expenditure invoice);
- Transfer funds for the supply of 10 sweaters to 120 UAH (100 20), - write down payment, send it to the bank. When the money will be transferred - to enter the bank statement.

Relevant documents look like.

Sales Invoice see on the picture 6.

Salary. Entering residues

WARNING! In the configuration of 2.51 or more to work with the documents needed to adjust the salary guide "Taxes and Deductions", introducing the inflation indices for each month until the current one. In addition, the data should be corrected to fit the limits of accrual rates and the periodic parameters of these values.

A. Form a reference to employees.

- Pay special attention to filling in the fields
- Date of admission
- Data on the s / n
- Benefits (5 minimum = 4, 10 min. = 9, etc.)
- Number of children
- Disabled, a union member
- Type of costs
- Type of activity
- Cost Account specified only under the condition that the account used in the calculation of Class 9
- Monitor periodic details

B. Enter the remnants of the salary. The document "Calculation of s / n")

The main parameters of the document

- the type of payment ("The introduction of residues")
- payment of labor (661)
- number of working days (sometimes it is necessary to calculate them manually).

Salary. Charge

First, we translate from the bank to the cashier DS.

Payroll - document, "Calculation of s / n", 08/04/03 (pic. 17)

- Open the document
- Click "Complete"
- Type of payment - Advance
- Account OT - 661
