

variety of creative backgrounds – including theatre and photography, to interior design and architecture. Around 15 applications are accepted with their designs and head there in November to build the suites.

To sum up, an Ice hotel is a most recent concept in the tourism sector and it is getting popularity across the globe. The ice hotels belong to the category of destination hotels as they arrange many attractive features for travelers and other tourists who are interested in some unusual entertainment. People love such spots more because of the exceptional features of ice hotels and it is the main thing which motivates people to come.

MEDICAL TOURISM IN UKRAINE

ELINA SARKISYAN, student

NATALIYA M. VLASHCHENKO, Associate Professor, PhD in Economics,
Scientific Adviser

MARYNA V. RYZHENKO, Associate Professor, PhD in Education, Language
Adviser

Nowadays, it is very important to stay healthy and care of yourselves, because, unfortunately, not only in Ukraine, but in the whole world become a very serious situation with dangerous disease such as Covid-19.

As we know, since ancient times a lot of patients have travelled in a long distance to receive help from famous physician and I would say that the same situation is happening now, but in a different direction.

Today, a big amount of people searching new, cheaper ways of solution of their health problems, but at the same time they want and prefer high quality of medical care. Therefore, not only Ukrainian patients, but also people from many countries of the world prefer treatment at our resorts.

In addition, to the above-mentioned, there are numerous examples. But, first, we need to divide them by regions of Ukraine. Firstly, the resorts of the Carpathians, such as Truskavets – one of the largest balneological resorts in the country, famous for the variety of mineral waters, Morshyn – a place where healing agents are chloride sulphate-sodium-magnesium waters, which are used for bathing and drinking, as well as peat mud and ozokerite and Solotvino – this resort is suitable for those who need a treatment of different types of allergies, particularly, asthmatic.

Secondly, we have Black Sea resorts, such as Ochakiv, which is the number one Sea spa in Ukraine, it is suitable for both children and adults. What is more, where the main medical profile of the sanatorium is diseases of the respiratory and nervous system, blood circulation. Finally, let's not forget about

the Azov Sea resorts where the most famous and popular among the customers are Berdiansk – a mud and climatic seaside flat resort of the steppe zone and Kyrylivka – a climatic seaside resort staying on which helps to restore and strengthen the central nervous and cardiovascular systems, upper respiratory tract, reduces inflammation in muscles and joints, as well as allergic reactions.

It is very clear from these observations that our motherland has a large number of places for health tourism, which would help people to restore their health, especially the elderly who have various chronic diseases. Moreover, a coronavirus pandemic is currently underway in the world, which obviously, has greatly shattered the general condition of the world's population of all ages. So, it goes without saying that most people will need such a spa treatment.

One argument in support of is that I read the news articles, which indicated that the borders of such old ones as Bulgaria, Cyprus and Georgia which is famous for its sources of mineral water and mud deposits, are open for the citizens of Ukraine.

The other side of the coin is, however, I believe that patients from Ukraine should not travel that far, since we also have a large number of places for treatment. For example, patients will be able not only to strengthen the immune system in the resorts of the Carpathians, but also relax in the beautiful nature among the mountains, rivers and a large number of plants.

In conclusion, I can say that although medical tourism in Ukraine differs in its not very productive advertising from other European countries in the tourist services market, it has all the potential to become the same popular place. This can only happen if the public is well aware of all the therapeutic possibilities, making a profit from this, and then it is possible to improve the condition of already existing resorts, as well as the quality of medical care.
