O. M. Beketov National University of Urban Economy in Kharkiv

The global network has provided humanity with a great number of jobs. You will not surprise anyone with such activities as the Internet marketing, online business, freelancing. Remote access has made homeschooling possible as well. It is enough just to sign up for online courses and you can become a student of Harvard or Oxford.

The Internet is a general innovation of the late twentieth century. Every day more and more people start to use it.

Computers have stuffed our lives, almost every family has them. We are accustomed to them and cannot imagine our leisure time without this wonderful innovation. With the help of computers, the Internet entered our life. It has become an integral part of every person's life. Now people cannot live a day without checking their mails and visiting their favorite sites. The Internet is not only an assistant in everyday work, and the other world, in which there are letterboxes, libraries, photo galleries, games, shops. With the help of the Internet, people can travel to different cities, visit tourist places, communicate with other people.

Electronic message, or e-mail for short, is one of the useful features of the Internet. You do not need to pay for the letter, but you can write whatever you want there. There are also many methods to use the Internet. You can search for a lot of information. You can use it for fun. But do not think that it is too easy to surf the Internet.

Recently, many have asked the question: "Is the Internet dangerous or useful?". In my opinion, there is no definite answer to this question. In fact, on the one hand, the Internet is a very good and useful thing. On the other hand, it has many disadvantages: dependence, waste of time, money, health.

Nowadays, almost all moms and dads worry that their children spend a lot of valuable time surfing the Internet. However, parents do not understand that this is their way of life and try to make their brainchild live without computers.

In my opinion, parents should not limit the time during which children use the computer. First, teens can communicate with their friends who live far away via email. Secondly, they have a good opportunity to develop their computer skills. They learn to work with documents, photos, videos. Furthermore, teenagers can relax after school by listening to their favorite music or watching movies on the Internet. Besides, they can find a lot of useful information to do their homework better.

In the current situation of the global pandemic, it is more necessary than ever to keep in touch with relatives, colleagues and friends. Through the Internet and its services it is now also very common trend of online concerts, conferences and even interviews. Stuck at home during the coronavirus pandemic, with cinemas, theaters closed and no restaurants to dine in, people all over the world have been spending more of their lives online. Our behaviors shifted, sometimes starkly, as the virus spread and pushed us to our devices for work, play and connecting. With the rise of social distancing, we are seeking out new ways to connect, mostly through video chat. We have also grown much more interested in our immediate environment, and how it is changing and responding to the virus and the quarantine measures. This has led to a renewed interest in different social media sites focused on connecting local neighborhoods.

The coronavirus pandemic has led to an acceleration in the digitalization process - consumers now shop online much more often, more and more people use the Internet as the main source of information and entertainment.

Online communication not only helps to get to know each other and establish connections, but also simplifies logistics and makes travel cheaper. No point in the world seems unattainable, and any journey is impossible.

The world has become interpenetrating. This provides unlimited opportunities and at the same time increases the risks. If a danger arises in one place, it can potentially threaten everyone.

No country, even the most developed or closed country in the world, can feel safe if there are wars somewhere, someone is starving, or infections like coronavirus break out.

It will no longer be possible to close one's own borders, it is necessary to build a collective security system and compensate for the damage caused to nature by joint efforts.
